

Ortronics/Legrand Selects VeriWave's WaveTest 90 to Conduct Wireless LAN Testing

Portland, OR – June 5, 2006 – VeriWave, Inc., the leading provider of performance analysis tools for wireless local area network (WLAN) devices and networks, today announced that Ortronics/Legrand, a global leader in high performance structured cabling systems, has chosen VeriWave wireless LAN (WLAN) test equipment for its wireless lab. Ortronics/Legrand will be utilizing the VeriWave WaveTest 90™ to test its family of Wi-Jack™ wireless access points, including the new Wi-Jack Duo™ access point, the world's smallest dual band/dual radio AP that mounts discretely in a standard, single-gang wall outlet.

The WaveTest 90 is a multi-client traffic generator and performance analyzer that is designed for equipment manufacturers to accurately analyze the performance of their WLAN infrastructure products, as well as for carriers and enterprise users that want to make the right choice when selecting WLAN equipment for deployment in their networks. The WaveTest 90 offers a complete set of tests to benchmark scalability and fast secure roaming capabilities of Access Points and WLAN switches, essential element for wide acceptance of WLANs. " We selected the WaveTest 90 because it is the only product that allows us to fully load our APs with a large number of stateful wireless clients and the benefit of testing to the IEEE benchmarks " stated Tony Walker, wireless marketing manager for Ortronics/Legrand. "It provides key capabilities, like scalability, accuracy, repeatability and automation, which will not only significantly shorten our time to market for new products, it assures us that any new products we develop will have the reliability needed for the mission critical applications in which our customers are using our wireless access points."

”VeriWave is proud to partner and assist Ortronics in proving the performance and capacity of their Wi-Jack Duo”, said Eran Karoly, VeriWave’s Vice President of Marketing. “The WaveTest 90 traffic generator / analyzer allows WLAN equipment vendors, for the first time, to test the true scalability and performance of their systems. By offering extensive automation and clear reporting, we are able to expand test coverage, lower test costs, and shorten test cycles resulting in higher quality products and faster overall time-to-market.

About VeriWave:

VeriWave is the leading provider of test systems for performance analysis of wireless local area network (WLAN) products. VeriWave’s products are used by equipment manufacturers to accurately analyze the performance of their products, as well as by carriers and enterprise users to make the right choice when selecting WLAN equipment for deployment in their networks. About Ortronics/Legrand:

Ortronics/Legrand, headquartered in New London, Connecticut USA, is a global leader in commercial Category 5e, Category 6 and 10 Gig copper, fiber optic, wireless and residential/MDU high performance, high capacity structured cabling systems, including patch panels, patch cords, workstation outlets, physical support solutions, 110 cross-connect systems and more. Ortronics/Legrand also offers engineering and technical support, systems planning, training programs and a 25-year extended products warranty and applications assurance warranty program.

Ortronics/Legrand is a subsidiary of Legrand (www.legrandelectric.com), the world specialist in products and systems for electrical installations and information networks, offering solutions for use in residential, commercial and industrial buildings. Operating in over 60 countries with sales of \$3.8 billion, it employs about 31,000 people and its catalogs list more than 130,000 products. At Legrand, innovation drives growth: with nearly 5% of sales invested in R&D every year, the group brings out a steady stream of new, high added-value products. For more information about
