

VeriWave Chosen to Provide Test Systems for InteropLabs Voice over Wireless Showcase at Interop Las Vegas 2007

Portland, OR., May 14, 2007 –VeriWave, Inc., the leading provider of Wireless LAN functional and performance analysis systems, has been selected by Interop Las Vegas 2007 as the sole provider for all test equipment used in the InteropLabs for the VoIP Wireless Initiative being held during the event, taking place at the Mandalay Bay Convention Center in Las Vegas, May 20-25. The InteropLabs is the world's only real-time live interoperability test bed for the latest networking technologies, and will showcase the latest solutions to real engineering challenges in a live, vendor-neutral, standards-based arena and will focus this year on two primary initiatives: Network Access Control and VoIP security and integration. The InteropLabs gives attendees the opportunity to test-drive new products and technologies based on performance, not marketing claims.

InteropLab attendees will be able to interact live with the VoIP Wireless Initiative demo, manipulating the call load as well as other varying network conditions, while experiencing first-hand the resulting impact this may have on call quality. VeriWave's WaveTest90 systems will generate traffic to demonstrate varying call volumes and network capacities, and provide ongoing monitoring of metrics used to assess performance — QoS, call control, capacity planning, provisioning, architecture, etc.

Leading providers of enterprise wireless LAN (WLAN) infrastructures participating in the InteropLabs VoWLAN showcase include: Aruba Networks, Cisco Systems, D-Link, Extreme Networks, HP, Juniper Networks, Motorola, and Trapeze Networks, each deploying access points, a WLAN switch and multiple VoIP handsets. The cooperative InteropLabs environment offers manufacturers a unique opportunity to gain new insights into challenges inherent in deploying multi-vendor, standards-based VoIP networks. "The focus of the InteropLabs is to help IT and business technology professionals gain confidence in cutting-edge solutions by showcasing the industry's latest and most innovative technologies," said Lenny Heymann, Interop General Manager. "This year's hand-selected list of distinguished participants, such as VeriWave, will ensure that Interop continues to lead the industry in network innovation, even in the face of changing business practices."

About VeriWave

VeriWave is the leading provider of test systems for performance analysis of wireless local area network (WLAN) products. VeriWave's products are used by equipment manufacturers to accurately analyze the performance of their products, as well as by carriers and enterprise users to make the right choice when selecting WLAN equipment for deployment in their networks. For more information about VeriWave, call (503) 473-8350, or go to www.veriwave.com

About Interop®

For 22 years, Interop®, part of the CMP Technology family of global brands, has helped IT and business decision-makers bring together the key components of a solid information strategy to drive efficiency and competitive advantage for their organizations. As business continues to drive the adoption of technology, and the converged network is creating new advantages, an emerging "IP for business" philosophy has woven itself into the fabric of business process applications that will be on display at Interop 2007 global events. Through in-depth educational programs, workshops, real-world demonstrations and live technology implementations in its unique InteropNet and InteropLabs programs, Interop® provides the forum for the most powerful innovations and solutions the industry has to offer. 2007 Interop events include Interop Las Vegas, May 20-25, Mandalay Bay Convention Center; Interop Moscow, May 30-31, Forum Hall; Interop Tokyo, June 11-15, Mukahari Messe; Interop New York, October 22-26, Javits Convention Center; and Interop Berlin, November 6-8, Fairground Berlin.
